## **COMPREHENSIVE LABS DIAGNOSTICS**

The comprehensive RP Panel of Comprehensive Labs enables detection of the respiratory pathogens through PCR technology.

Not only it helps in detecting Bacterial Infections like Bacterial Pneumonia, Whooping Cough and Antibiotic resistance genes

### **Adenovirus Infection:**

that causes barking coughs, hoarse, croup & pneumonia

### **Respiratory Syncytial Virus (RSV):**

Which causes respiratory infection dangerous for elderly as well as toddlers.

## RESPIRATORY PATHOGENS PANEL:

'Respiratory Pathogens Panel ('RP Panel') identifies pathogens that exists in Respiratory tract. Respiratory tract attracts a lot of pathogens since it involves the breathing therefore, bacteria, virus and other microscopic organisms passes through this tract that causes illness. (We can place an image of the respiratory tract consisting of bacteria, virus.)

## ADVANTAGES OF USING COMPREHENSIVE LABS DIAGNOSTICS RP PANEL

It provides a detailed analysis of reports, customized for the user convenience along with interpretations

It comes with variety of the modules for users which includes Medication prescription and Antibiotic stewardship

It acts as a One comprehensive tool which is equally effective for the detection of bacterial as well as pathogenic infections

Enhanced experience of turnaround time without involvement of any special medium or equipment under its multiplex mode which makes it one of the most effective tools in the market.

Culture setup mostly requires a time ranging in excess of 72 hours for the detection of antibiotic resistance. RP Panel comes with a large range of antibiotic resistance genes which enables the detection to be made inside 48 hours.

Comprehensive Labs is a trusted partner in delivering quality reports and products that are user friendly as well as comprehensive.

### Coverage of Virus, Bacterial & AR Genes diagnostics under Comprehensive Labs RP Panels

Virus		
Coronavirus NL63	Bodetella Parapertussis	NDM
Coronavirus 229E	Haemophilus Influenza	OXA48
Coronavirus OC43 Influenza A&B	Streptococcus Pneumonia	VIM
Respiratory Syncytial Virus	Chlamydoiphila Pneumonia	IMP
Flu A (H1, H1pdm09, H3)	Legionella Pneumphila	KCP
Adenovirus	Bodetella Perpertussis	OMP
Enterovirus	Mycoplasma Pneumonia	NDM
Rhinovirus		
Bocavirus		
Metapneumovirus		
Parainfluenza Virus (1,2,3,4)
